

Manually configuring an iPad to use AirCatch

To enable iPads to communicate with AirCatch, a mail account needs to be set up. This can be done as follows.

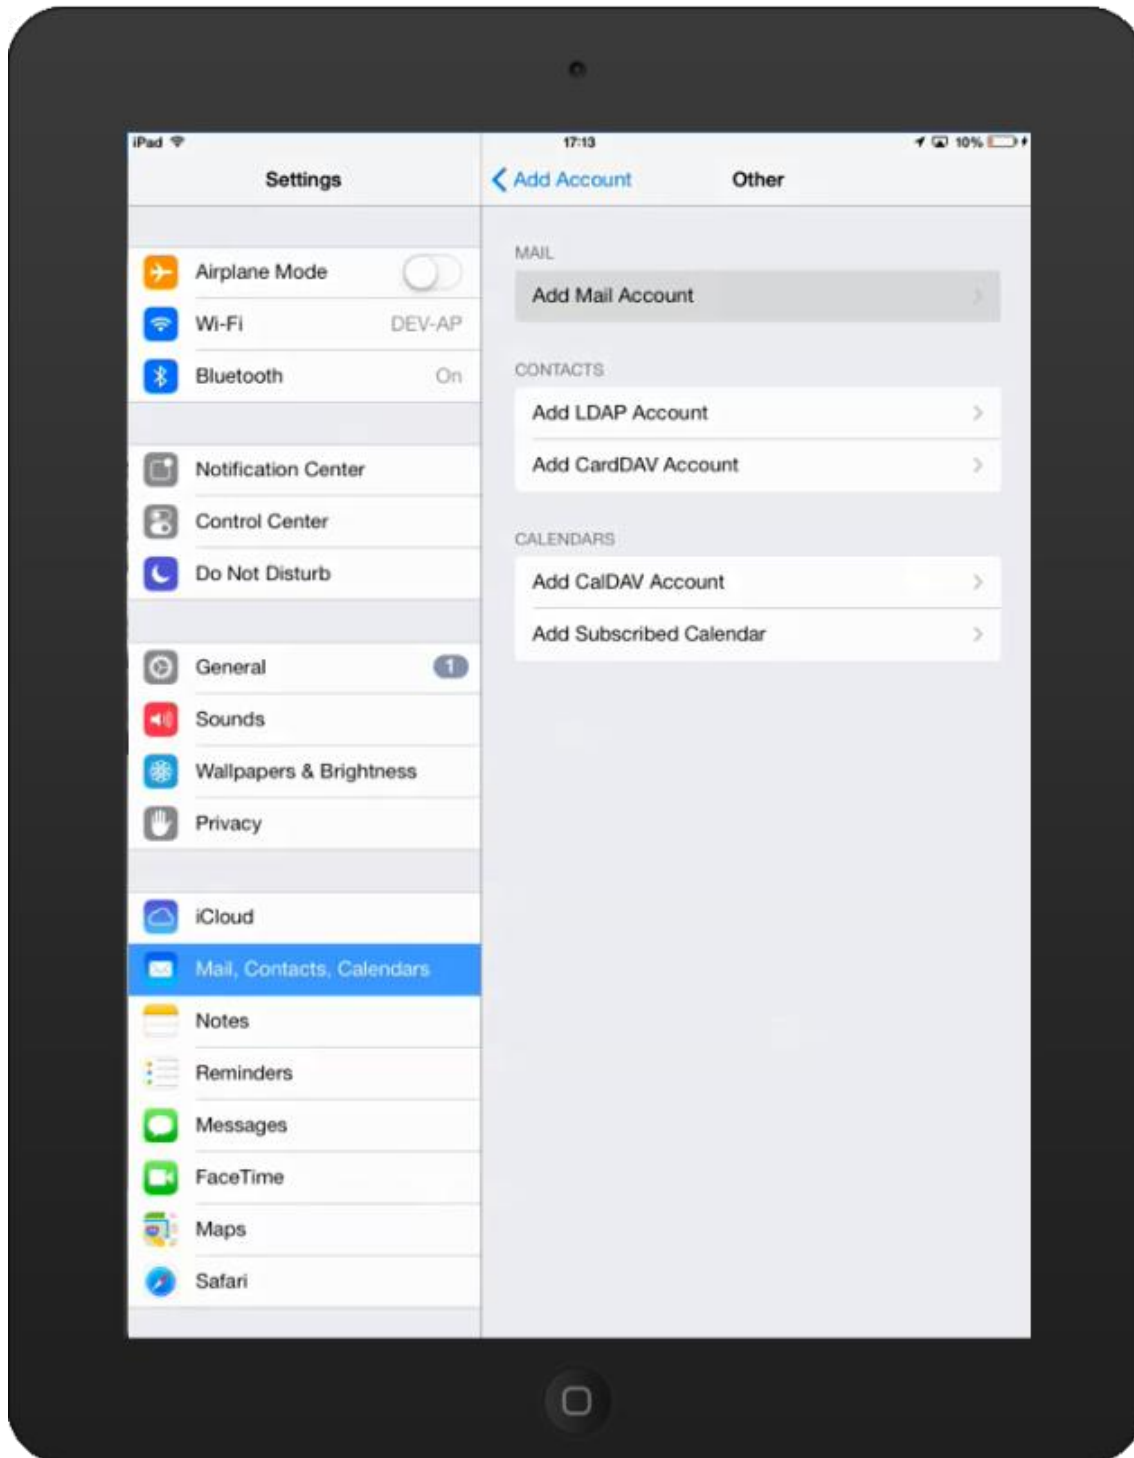

First, select the Settings screen. Then select Mail, Contacts and Calendars

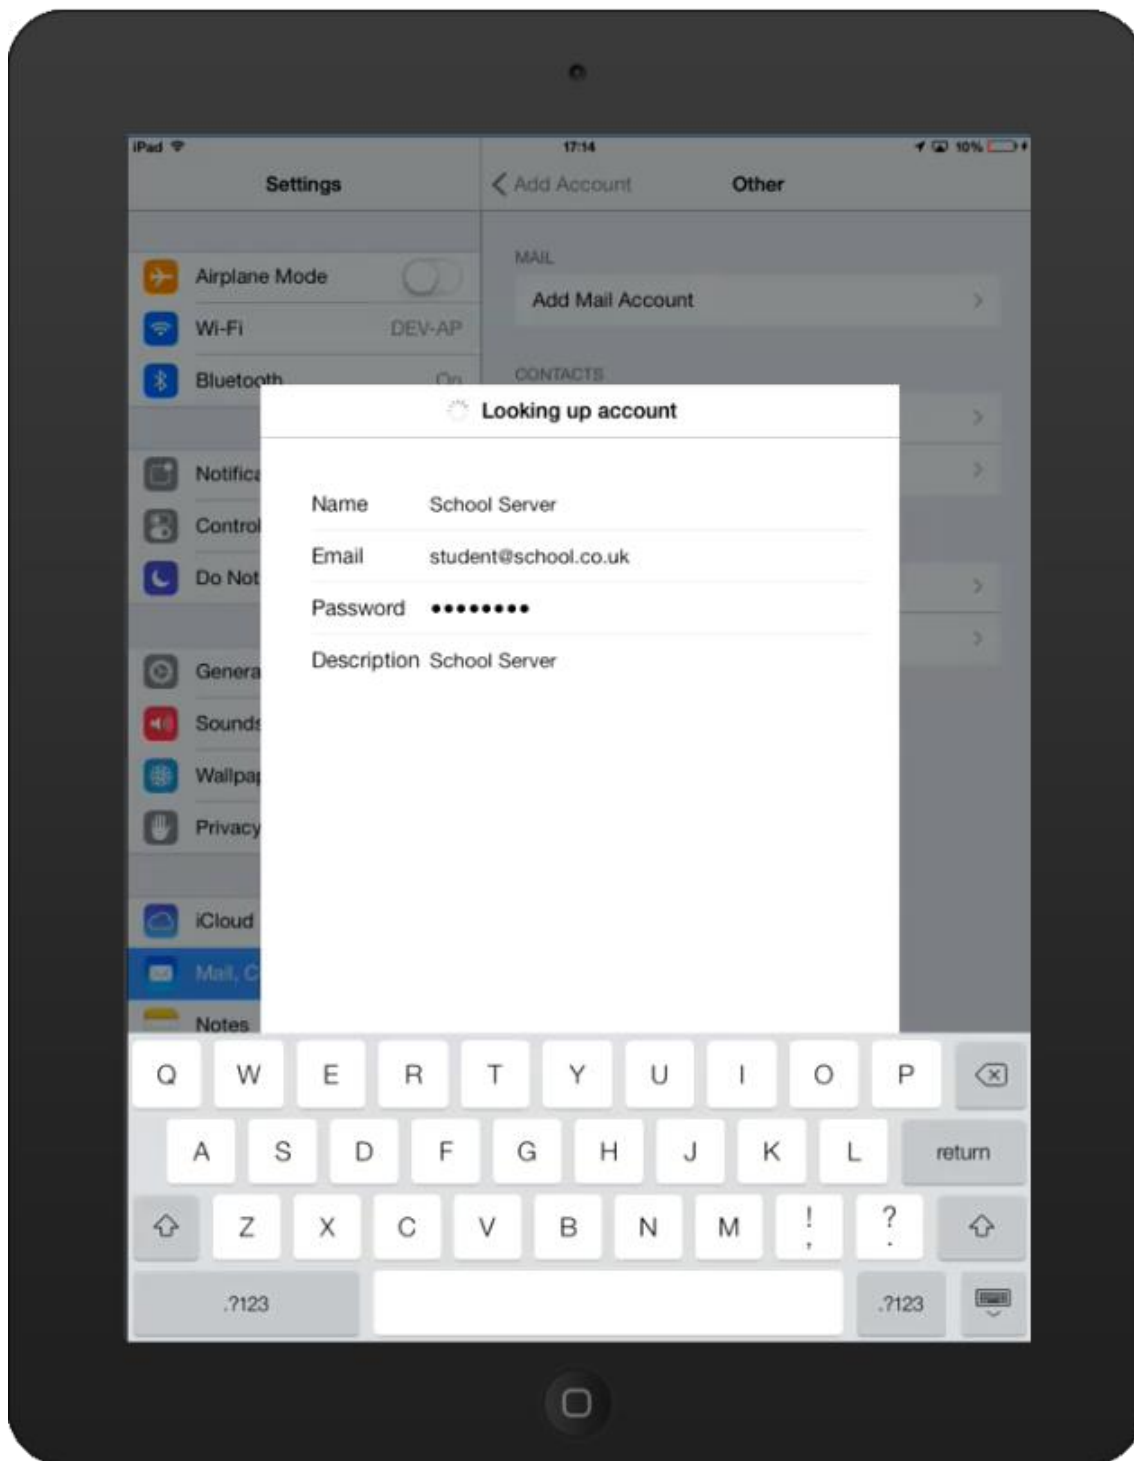

Select **Add Account**, then **Other**

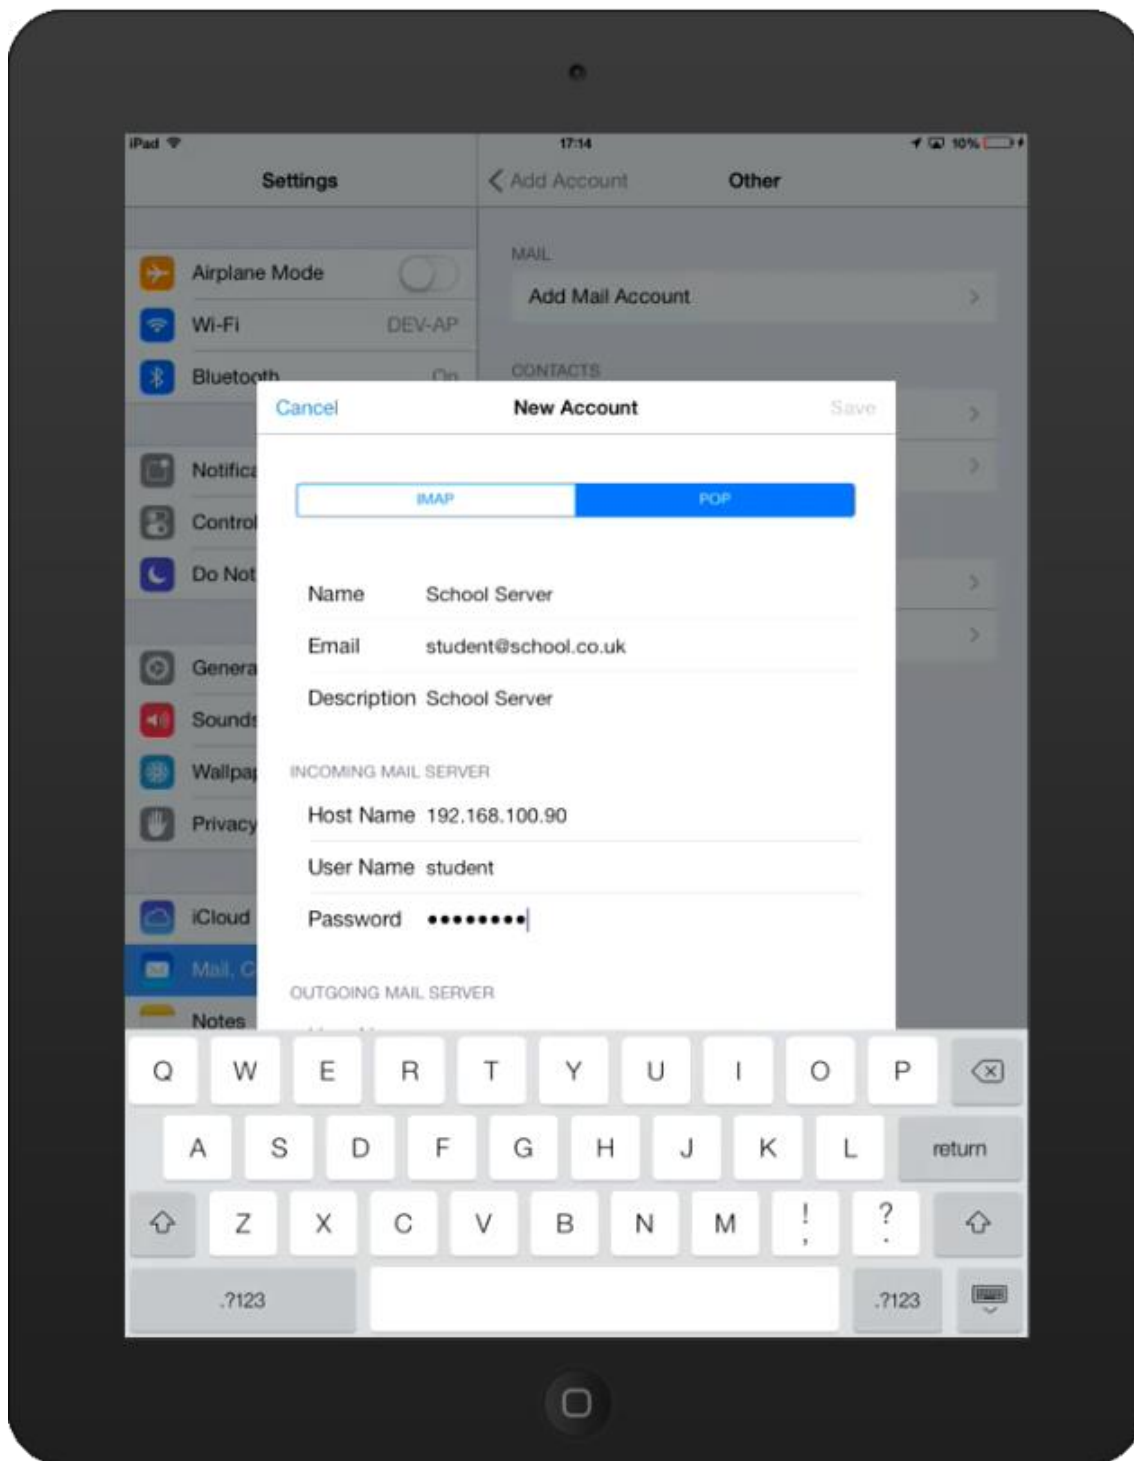

Select Add Mail Account

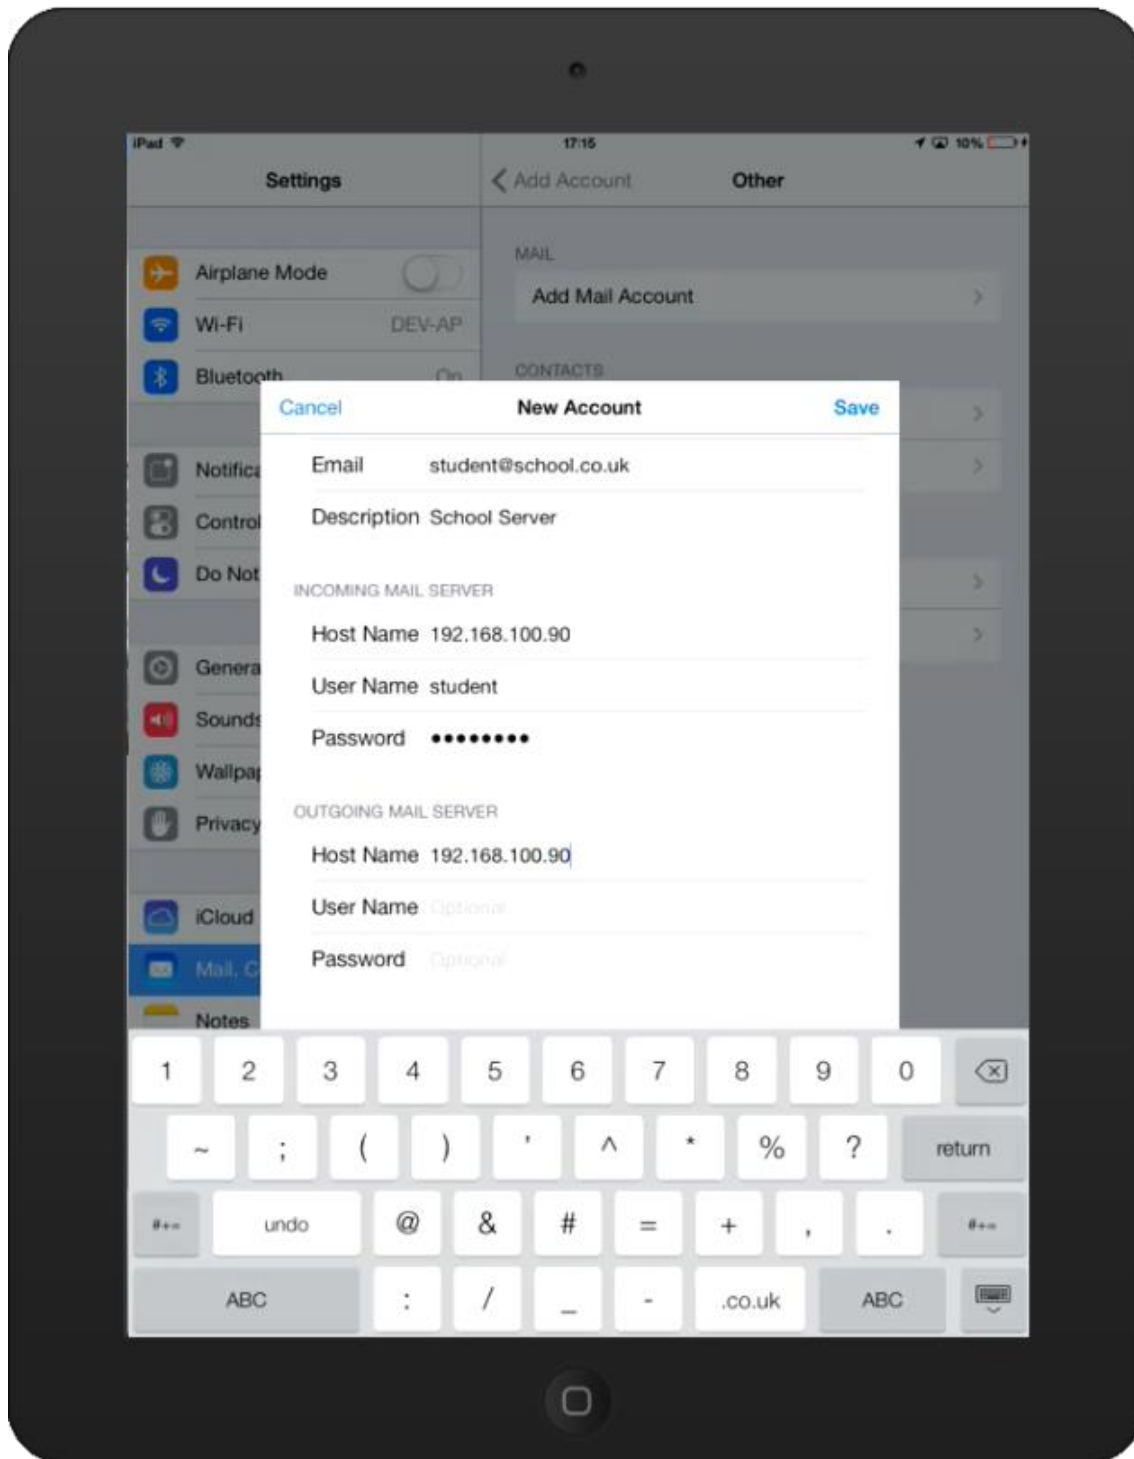

Choose a **Name** and **Description** for the account. The **Email** address and **Password** can be anything, as you are only send emails to the AirCatch server. Click **Next**.

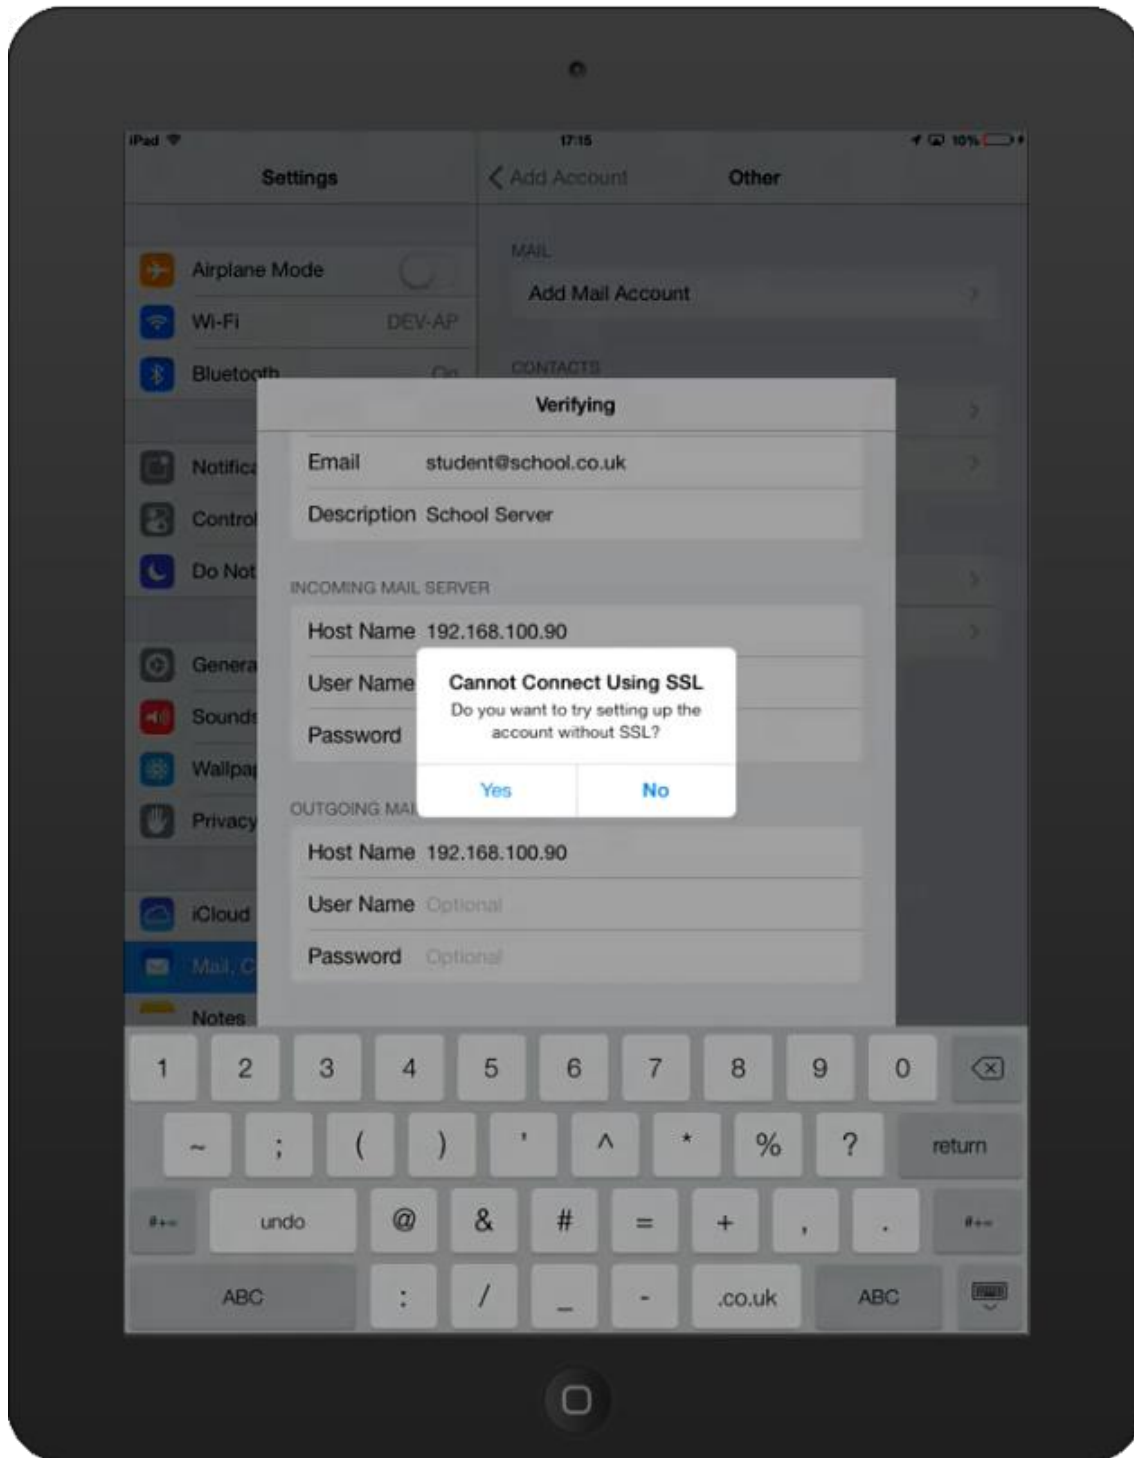

The **Incoming Mail Server** settings are not used, but are required by the iPad mail setup, so you can enter any values in here.

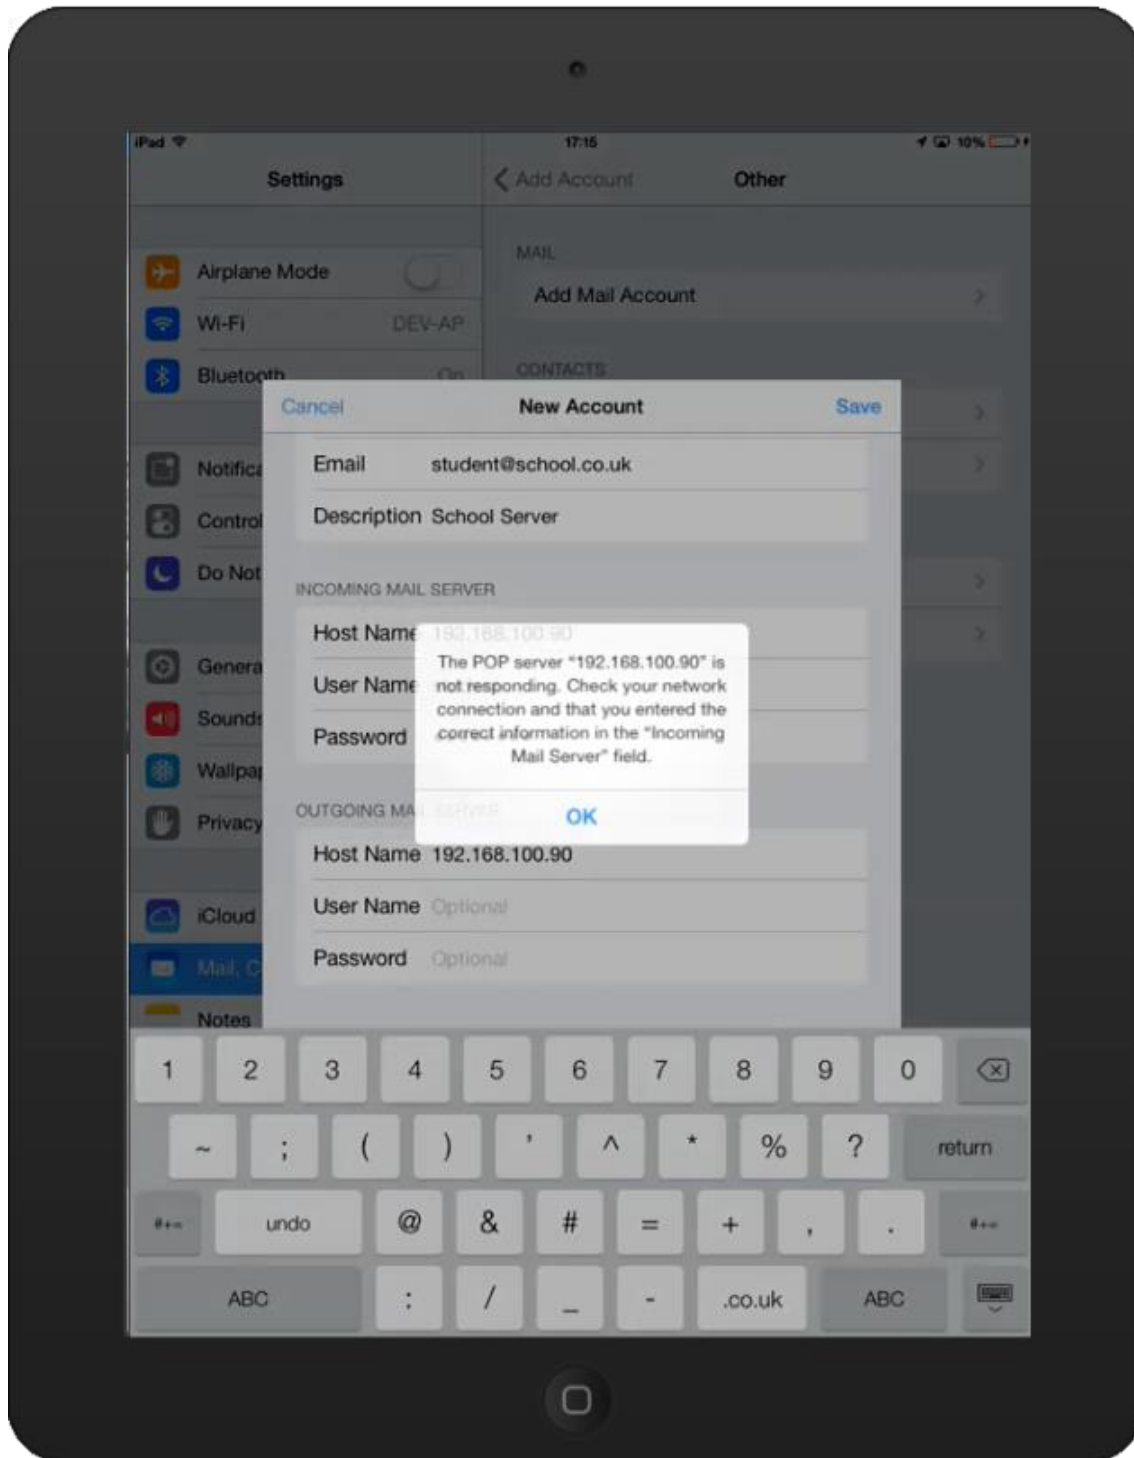

The **Outgoing Mail Server** is the IP address or Host name of the server you have installed the AirCatch software on to. This will probably be your main file server. **User Name** and **Password** are not required. Click **Save**

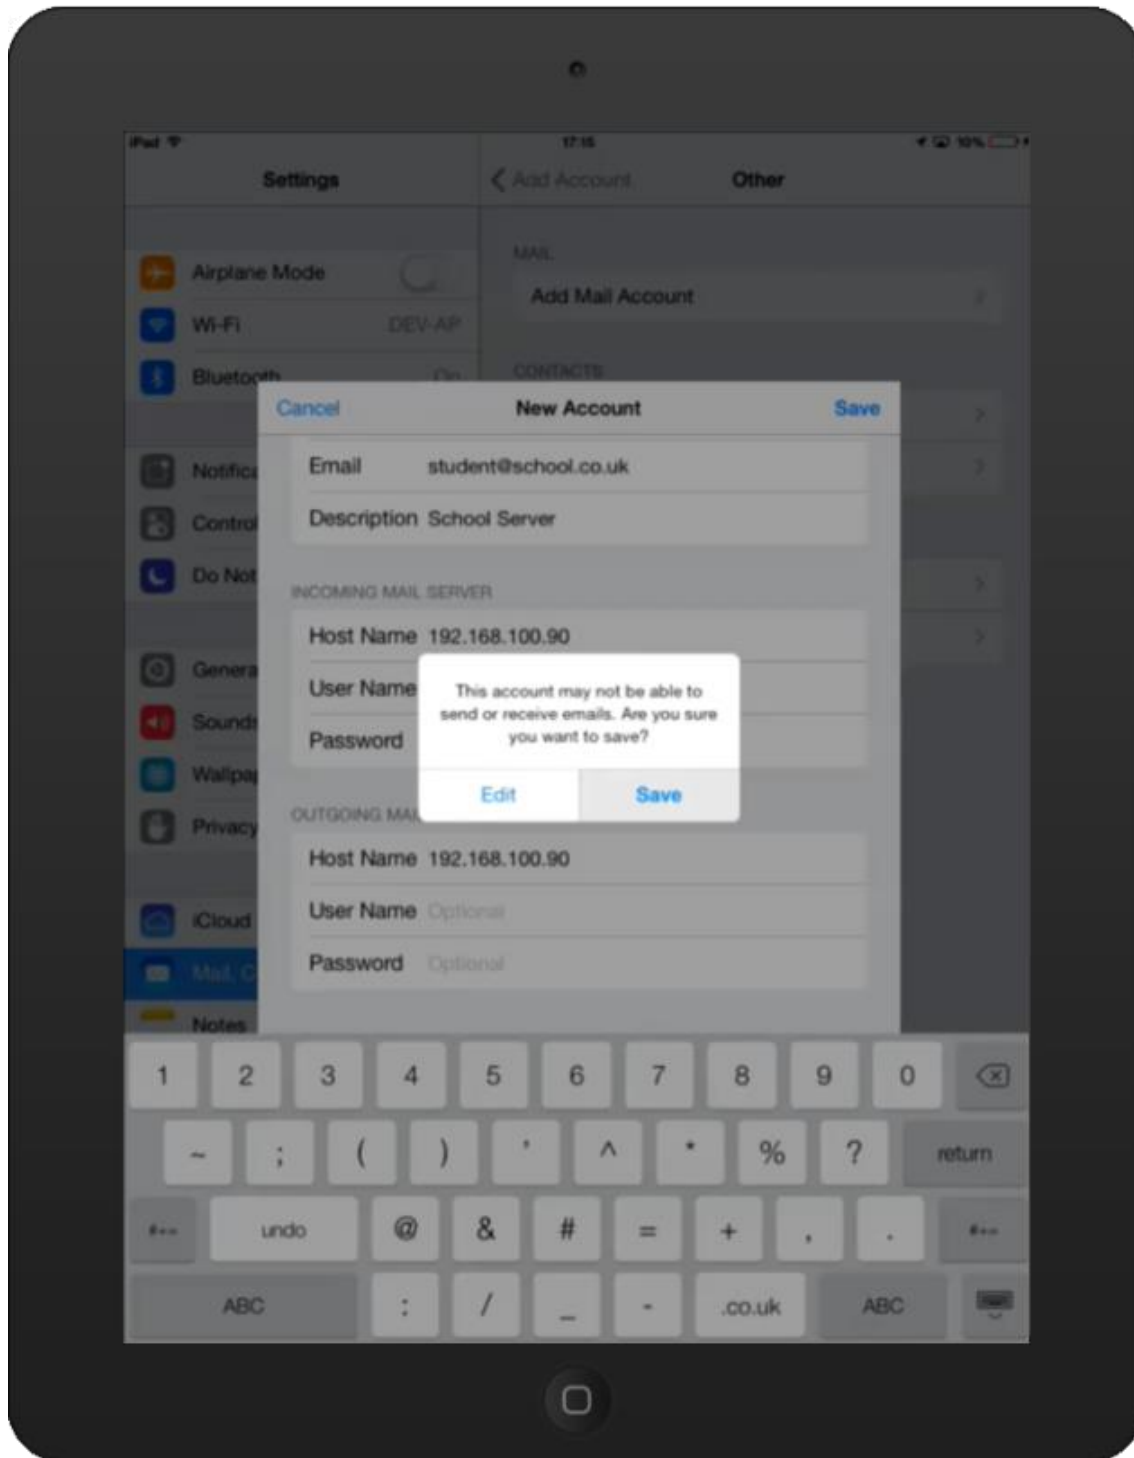

You will see a message asking whether you want to try connecting without SSL. Click **Yes**

You will then see a message stating that the IMAP or POP server is not responding. Click **OK**

You will then see a message stating the account may not be able to send or receive. Click **Save**

You will now see the new account listed under **Mail, Contacts, Calendars**. This account can now be used to send files to the AirCatch server
